Dimensioned sketches of chain hoists

ABUCompact GMC, GM2 and GM4

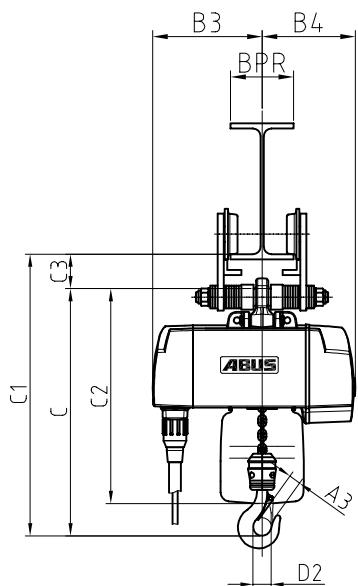

stationary

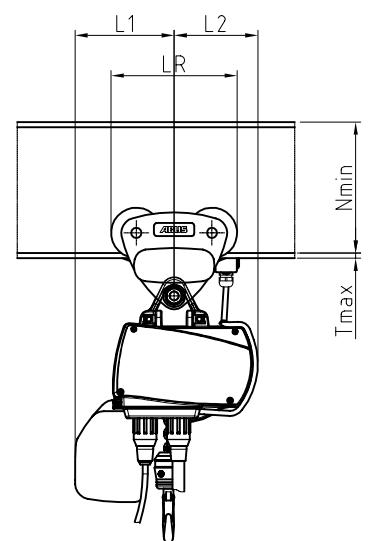

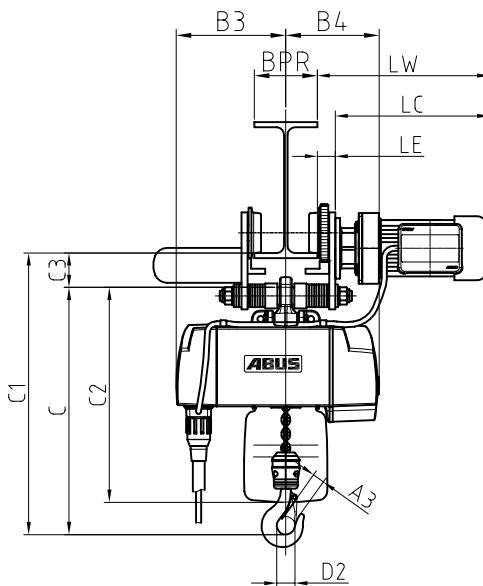

with additional housing

with HF push trolley

with EF electric trolley

Standard equipment

The new generation of ABUCompact chain hoists feature a fresh new design and convincing technical solutions. The 3 phase 400 volt hoists units are available in four different sizes to reliably handle loads from 80 kg through 4000 kg. The motor and the gear unit are of modular design, allowing us to produce a wide variety of versions for lifting speeds up to 20 m/min and FEM groups up to 4m at attractive prices.

Details of the ABUS electric chain hoist range and introduction dates are given in the selection table. Why not take advantage of the additional features described from page 8 onwards.

The small GMC hoist rounds off the ABUCompact range. With infinitely variable lifting speed and a load capacity of 100 kg or 200 kg, this unit, supplied ready for connection to a 230 V power socket, is the ideal hoist for flexible and low capacity applications.

ABUCompact GM2 to GM8

Scope of supply: electric chain hoist with pendant control handset and cable, ready to connect up to start work with its chain collector, chain and mains connection already fitted.

- hoist body finish painted RAL 5017 (traffic blue)
- hinged, removable suspension bracket
- operating voltage: 3-phase AC, 380 to 415 V, 50 Hz
- degree of protection IP 55, insulation class F
- control via pendant control handset complete with emergency stop button, degree of protection IP 65
- direct control
- alternatively 48 V electronic control with semiconductor technology for GM8
- quick plug-type connections with twist lock
- 2 lifting speeds (main and precision lift)
- overload protection with externally adjustable slipping clutch
- high-strength, galvanized profile steel chain with chain container
- hook path 3000 mm
- pendant control cable to suit hoist hook path

ABUCompact GMC

ABUCompact GMC

Scope of supply: electric chain hoist with pendant control handset and cable, ready to connect up to start work with its chain collector, chain, approximately 3 meters of mains power cable and connection already fitted.

- hoist body finish painted RAL 5017 (traffic blue)
- hinged, removable suspension bracket
- operating voltage: single-phase AC, 230 V, 50 Hz
- degree of protection IP 21, insulation class F
- control via pendant control handset complete with emergency stop button, degree of protection IP 65
- infinitely variable lifting speed
- overload protection by slipping clutch with fixed adjustment
- high-strength, galvanized round steel chain with chain container
- hook path 3000 mm
- pendant control cable to suit hoist hook path

Technical details

useful information on the ABUCompact GM2 to GM8

Standards and safety regulations

All ABUS chain hoists are designed and manufactured in accordance with the applicable EU directives and harmonized standards, as well as the BGV D8 accident prevention regulations and the German Equipment Safety Act.

Motor and gear unit

The motor and gear units are of modular design, allowing a variety of combinations for different lifting speeds. All the motors used are sturdy squirrel-cage units with 2-pole and 8-pole windings and the gear unit is separately encapsulated. This ensures considerable benefits for installation and maintenance. The permanently lubricated spur gear features bevelled gear wheels and roller bearings for smooth running.

Integrated safety brake

The DC disk brake features asbestos-free brake linings with a long service life (a million braking operations up to the first adjustment). The adjustable brake is designed for a very short run-on.

Suspension bracket

The removable, hinged suspension bracket is designed for easy suspension and removal of the hoist. The bracket ensures that the hoist is positioned in a fixed direction. On GM2 and GM4 hoists, the bracket is designed for installation in two positions, with an angle of 90° between them. Without the suspension bracket, the hoist may also be rigidly fixed by other means. The reduced installation spacing then allows an increase in the lifting height.

Slipping clutch

The slipping clutch offers reliable protection against overloading. Special linings designed for minimum wear ensure high safety levels over the entire service life of the unit. The slipping clutch is designed for easy external adjustment.

Chain system

The chain system consists of a high-precision chain sprocket entirely surrounded by the chain guide. Both the chain sprocket and the chain guide are of modular design, allowing easy replacement without the need to spend time and money dismantling the hoist to reach the parts.

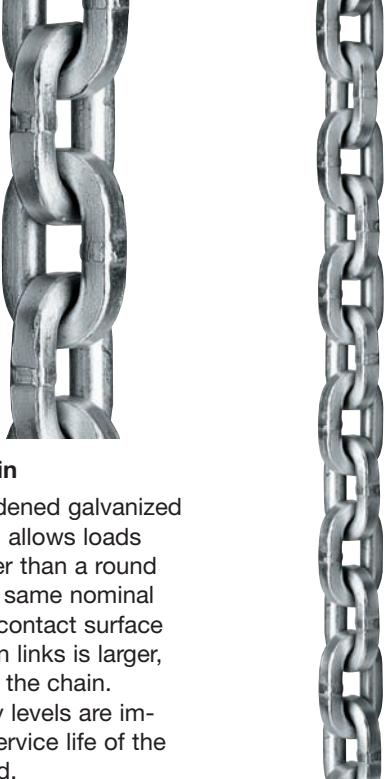

2 lifting speeds

Two lifting speeds, one for fast lifting and one for precision positioning, are a standard feature. The speed ratio (precision:main lift) is 1:4 for the GM2, GM4 and GM6 and 1:6 for the GM8.

Rotating hook block (single fall)

The hook block is designed to rotate on the chain. The hook and the hook block form a single, torsionally stable unit. The load can be effectively guided and oriented using a hand on the hook block.

Profile steel chain

The specially hardened galvanized steel profile chain allows loads about 25 % higher than a round steel chain of the same nominal dimensions. The contact surface between the chain links is larger, reducing wear on the chain. In practice, safety levels are improved and the service life of the chain is prolonged.

Quick plug-type connectors

The power supply and the control unit are connected up using quick plug-type connectors with twist locks. The connection is firm and confusion is not possible. These connectors save time and make installation and maintenance work safer.

48 V electronic control system

The electronical control features no-wear semiconductor technology. This configuration allows considerable weight and space savings compared with mechanical contactors. (Standard equipment for GM8, optional for GM2, GM4 and GM6)

Sheathed control line

No additional strain relief devices are required with the new sheathed control line. Tensile forces are absorbed by the specially coated fabric of the sheath. The conductors inside the sheath can move freely and are effectively protected against mechanical damage.

Pendant control

ABUCompact hoists are controlled from ground level using ergonomically designed ABUCommander pendant controls with 2-stage push buttons and large emergency stop switches. The pendant control is connected using quick plug-type connectors with twist locks (bayonet locks).

Optional extras for MORE convenience

Operating hours meter

An operating hours meter allows a realistic assessment of the work actually performed by a hoist. The operating hours indicated can be used for calculating the remaining service life of the hoist in accordance with FEM 9.755. With an operating hours meter, longer safe working periods are normally possible.

ABUliner frequency converter for lifting and lowering

Infinitely variable speed control for the smooth handling of sensitive products such as glass or ceramics or long, bulky loads. The ABUliner also allows precise positioning for tricky assembly and joining operations.

For additional safety, the frequency converter features an electronic shut-down system with two programmable shut-down points that can be set via the pendant control.

48 V electronic control system for lifting and lowering

The electronical control system features advanced, no-wear semiconductor technology and is integrated in the hoist.

This configuration features considerable weight and space savings compared with conventional mechanical contactors. The control voltage is 48 V.

Alternative: electronic control system for lifting, lowering and trolley travel

Extended semiconductor electronic control system also incorporating trolley travel control functions. If this option is selected for a GM2 hoist, the control system is installed in an additional housing on the hoist.

Electronic limit switch (two positions)

The electronic limit switch features two programmable shut-down points for even safer operation. The shut-down points for highest and lowest hook position can be programmed individually using a teach-in button on the pendant control. When the shut-down point is reached, the lifting or lowering movement is stopped. This option is only available in combination with a 48 V electronic control system.

Alternative: limit switch with two additional switching points

This option features two additional switching points between the highest and lowest hook position. These can be used as stop-and-go points during operation.

Cruciform limit switch for trolley travel

These switches can be used to slow the trolley to a lower speed ahead of the end stops. When the trolley has passed the limit switch, it can be moved back in the other direction at low speed. This option is only available in combination with a contactor-type control system/electronic control system.

Alternative: Deceleration to low trolley travel speed **followed by shut-down** at the end of trolley travel before the end stops are reached. When the trolley has passed the limit switch, it can be moved back in the other direction at high speed.

Additional power socket on hoist

This option includes an additional 5-pole (3/N/PE) power socket on the hoist for ancillary equipment. The socket is connected upstream from the emergency stop switch and the ancillary equipment therefore remains in operation following an emergency stop. Easy connection and disconnection is possible. Depending on the individual application, it may be necessary to provide a 5-pole power supply. (This option is not available in combination with an electric trolley.)

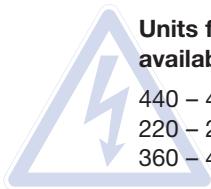

ABUS Mini-RC remote control unit

ABUS Mini-RC plug and play radio remote control unit for two-stage lifting and lowering for a range up to 25 m. The control unit consists of a lightweight hand-held transmitter with batteries and belt clip, an integrated horn, emergency stop switch and undervoltage detection system with buzzer. The receiver is designed for plug and play operation and can simply be plugged into the hoist instead of the pendant control. This option is only available in combination with a 48 V control system.

Alternative: Mini-RC for two-stage lifting and lowering **as well as trolley travel.** For radio remote control, cruciform limit switches are recommended for limiting trolley travel. For optimum operation, advance slow-down followed by shutdown is strongly recommended.

Units for special voltages available on request:

440 – 480 V / 60 Hz	208 – 230 V / 60 Hz
220 – 240 V / 50 Hz	550 – 600 V / 60 Hz
360 – 400 V / 60 Hz	460 – 500 V / 50 Hz

ABUS trolleys

ABUS HF push trolleys

- sturdy design with roller bearings
- virtually no maintenance required
- machined rollers
- fitted with drop stop and wheel climb prevention lugs
- colour RAL 5017 (traffic blue), suits many different chain hoist models
- adjustable for flange widths from 42 to 305 mm

ABUS EF electric trolleys

- sturdy design with roller bearings
- virtually no maintenance required
- speed 5/20 m/min
- high-quality standard drive system
- degree of protection IP 55
- durable electromechanical disk brake
- machined rollers
- fitted with drop stop and wheel climb prevention lugs
- colour RAL 5017 (traffic blue), suits many different chain hoist models
- adjustable for flange widths from 64 to 305 mm

An important subject: drive group (FEM group) selection

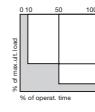

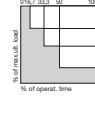

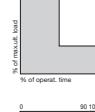

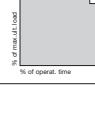

Apart from the type of hoist required, the load capacity, the hook path and the lifting speed, the drive or FEM group is one of the main criteria to consider when selecting a hoist. The drive group must be selected to ensure that the hoist is fit for use for its intended purpose.

Standard hoists are normally designed for a mean theoretical service life of 10 years, subject to operation in accordance with FEM 9.511. If the drive group selected is not appropriate in view of actual service conditions, the actual service life may be considerably shorter than 10 years. The results are excessive expenditure for maintenance, repairs and overhauls. In Germany, accident prevention regulations VBG D8 and D6 require hoist operators to determine the used-up portion of the theoretical service life during each regular inspection of the hoist. When the theoretical service life has elapsed, the hoist must be de-commissioned. Continued operation is only permitted if an inspector finds that there are no objections to continued operation and lays down conditions for operation. Normally, the inspector requires the hoist to be overhauled. The objective of these requirements is to ensure that each hoist is only operated within its safe working period (S.W.P.).

The following table indicates the theoretical service life D in hours for FEM groups 1 Bm, 1 Am, 2 m, 3 m and 4m.

	Drive group	1Bm/M3	1Am/M4	2m/M5	3m/M6	4m/M7
Line	Load population	Theoretical service life D (h)				
1	light	3 200	6 300	12 500	25 000	50 000
2	medium	1 600	3 200	6 300	12 500	25 000
3	heavy duty	800	1 600	3 200	6 300	12 500
4	very heavy duty	400	800	1 600	3 200	6 300

If the mean working time t_m and the load population are known, the correct drive group in accordance with DIN 15020 or FEM 9.755 can be selected using the following table.

Load population	Definition of load population	Mean working time t_m per working day in h				
1 (light)	($k \leq 0.50$) Only operated at maximum load in exceptional cases, mainly operated at very low load, small dead load		≤ 2	2 – 4	4 – 8	8 – 16
2 (medium)	($0.50 < k \leq 0.63$) operated quite frequently at maximum load, operated continuously at low load, medium dead load		≤ 1	1 – 2	2 – 4	4 – 8
3 (heavy duty)	($0.63 < k \leq 0.80$) operated frequently at maximum load, operated continuously at medium load, heavy dead load		≤ 0.5	0.5 – 1	1 – 2	2 – 4
4 (very heavy duty)	($0.80 < k \leq 1$) operated regularly at maximum load, very heavy dead load		≤ 0.25	0.25 – 0.5	0.5 – 1	1 – 2
Drive/FEM group in accordance with DIN 15020 or FEM 9.511			1Bm	1Am	2m	3m
					4m	

In addition to the mean working time per day, t_m (total average hours of operation of the hoist per day), the correct assessment of the load population is essential for selecting the appropriate drive group. The value t_m is given by the following equation:

$$t_m = \frac{2 \times \text{mean lifting height (m)} \times \text{load cycles (1/h)} \times \text{working time (h/day)}}{60 \text{ (min/h)} \times \text{lifting speed (m/min)}}$$

Mean lifting height

the average hook travel under actual operating conditions

Load cycles

the average number of lifting operations per hour. A load cycle consists of one lifting and one lowering operation, i.e. two hook movements (lifting operations with an empty hook as a result of process conditions must also be taken into account in determining load cycles, but also make the load population determined less severe.

Working time

average working time per day within which the average load cycles per hour are performed

Lifting speed

average lifting speed (normally the maximum lifting speed) at which the load cycles are performed.

The selection of the next highest FEM group results in a doubling of the theoretical service life if the operating conditions assumed remain unchanged.

Further information on this rather complex subject is given by FEM 9.755 and the fourth supplement to accident prevention regulation VBG 8 for winches, hoists and traction systems. We will also be pleased to send you our planning service form for selecting the correct FEM group as well as an article concerning the determination of remaining service life.

Optional extras

Based on standard hoists:

stationary type, pendant control for lifting/lowering, control from trolley,

operating voltage 3~ 380-415 V/50 Hz

GM2, GM4, GM6: direct control

GM8: 48 V electronic control

Possible scope of supply:

X Can be supplied as additional equipment, additional charge applies

(Z) Chain hoist with additional housing for extended electric/electronic equipment; please note larger installation dimensions!

- not available

ABUS trolley current collectors

Weight kg	Ref.
3.5	11898

ABUS festoon power supply system*

* for track lengths up to 30 m

■ Standard equipment

- 1** Transitional terminal box (flat/round cable)
- 2** End clamp
- 3** Flat cable carrier
- 4** Flat cable

Fixed components

Transitional terminal box, end clamp, current collector carrier, mains switch, trolley current collector

- 5** Rail
- 6** Rail support
- 7** Mounting console
- 8** Clamping brackets

Length-dependent components

Flat cable carriers, flat cable, rails, rail supports, rail connectors, mounting consoles, clamping brackets

- 9** Current collector carrier
- 10** Trolley current collector
- 11** Rail connector
- 12** Mains switch

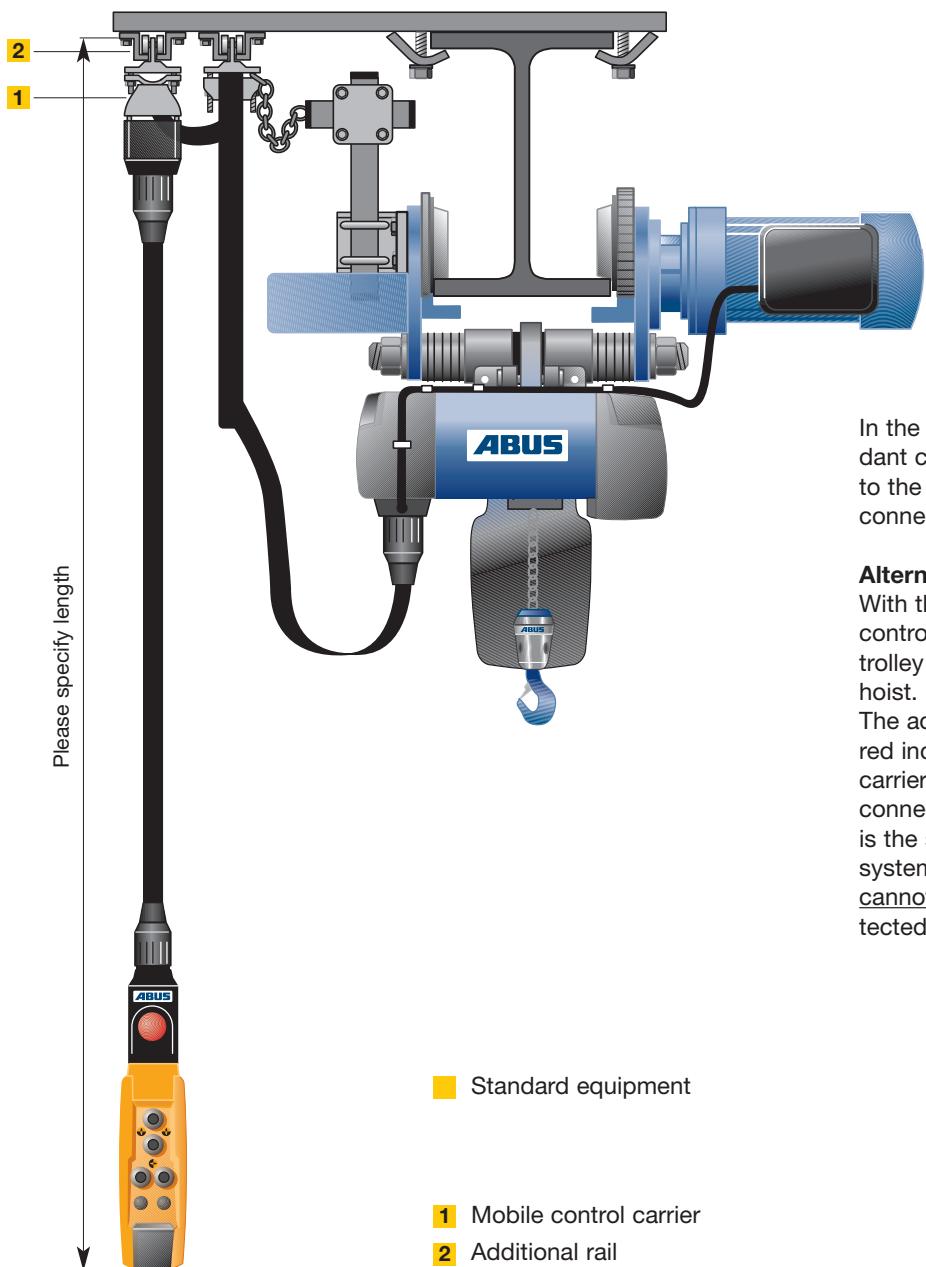

- The riser cable from the mains switch and cabling from the mains switch to the terminal box, including accessories, are not included in the scope of supply.

The voltage drop must be taken into consideration for the design of the festoon system.

The festoon system is prefabricated, i.e. supplied with the flat cable on the cable carriers, current collector carrier and end clamp.

* for track lengths
up to 30 m

ABUS power supply system with mobile control*

Fixed components

Fixed components as for festoon system on page 19, plus: end clamp, mobile control carrier, bolted joints, end stop

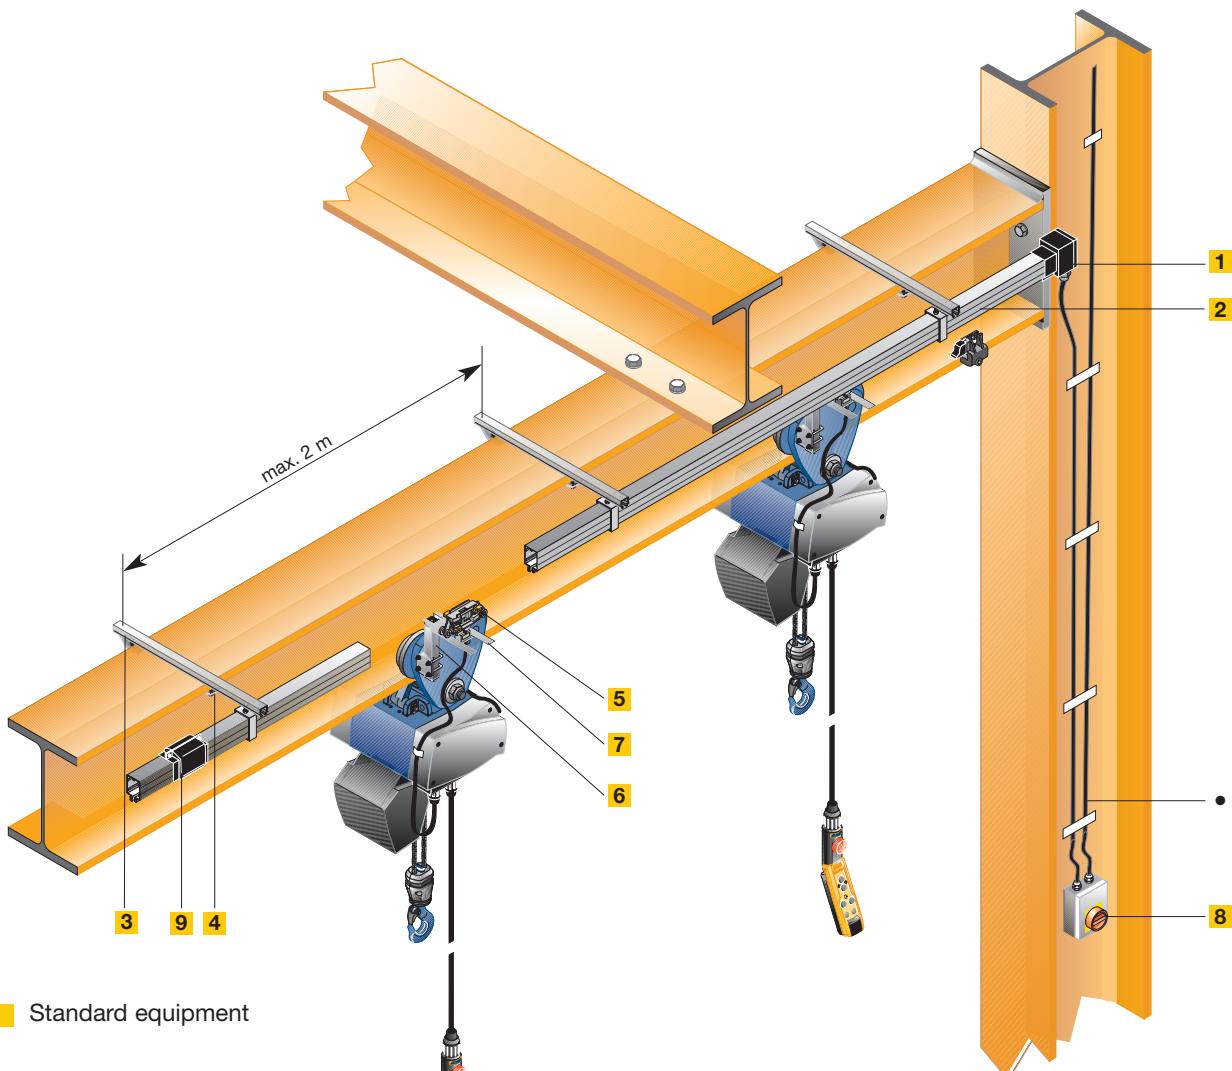

Length-dependent components

Length-dependent components as for festoon system on page 19, plus: additional cable carriers, flat cable, rail supports, rail connectors for mobile control carrier

The voltage drop must be taken into consideration for the design of the system.

The system is prefabricated, i.e. supplied with the flat cable on the cable carriers, current collector carrier and end clamp.

ABUS safety conductor system

■ Standard equipment

1 Power supply end feed

(line feed in the case of KBH 4/63)

2 Protected conductor

3 Mounting console

4 Clamping brackets

5 Current collector carrier

6 Trolley current collector (part of scope of supply for hoist)

7 Collector fork

8 Mains switch

9 Safety conductor and housing connector

Fixed components

End cap, power supply end feed or line feed, anchor mounts, reinforcement clamps, current collector carrier with 4 m connecting cable, collector fork, mains switch

Type

KBH 4/40

KBH 4/63

Length-dependent components

Safety conductor, sliding mounts, mounting consoles, clamping brackets

Type

KBH 4/40

KBH 4/63

Power supply from the centre of the conductor is required if the track length is above 30 m.

- The riser cable from the mains switch and cabling to the power supply point, including accessories, are not included in the scope of supply.

The voltage drop corresponding to the track length must be taken into consideration for the design of the safety conductor system.

(fold-out dimensioned sketches
on pages 3 and 30)

BKT 13-8	54	28	38

The first step towards your ABUCompact

Just copy the form, fill in your details and fax it to us. We will send you an initial quotation as soon as possible.

**Fax No.
(01252) 749 001**

Company: _____

Name: _____ Phone: _____

Address: _____ Fax: _____

Details of the hoist you need:

Quantity: _____ Load capacity: _____ kg Hook path: _____ m

Quantity: _____ Load capacity: _____ kg Hook path: _____ m

What lifting speeds do you need?

- high lifting speeds because of long hook path and frequent use
- precise lifting and lowering more important than speed
- please provide advice

What operating voltage is available?

- 3 x 400 V / 50 Hz
- ____ V / ____ Hz

Do you need to move the load along a girder?

- no (stationary use)
- yes, with push trolley (push-pull operation)
- yes, with electric trolley (electric operation)

Is a power supply system required?

- no
- yes, I am interested in
 - a festoon system (max. travel 30 m)
 - a protected conductor (for longer travel or more than one hoist on one girder)
 - please provide advice

If so, is a trolley track girder available?

- yes length: _____ mm
height: _____ mm
flange width BPR: _____ mm
type of profile: _____
- no

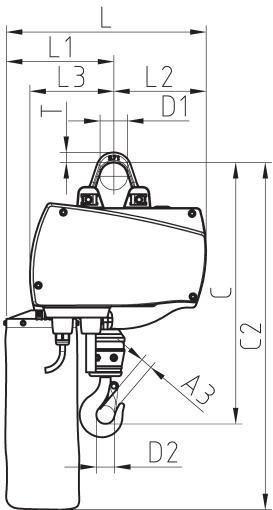

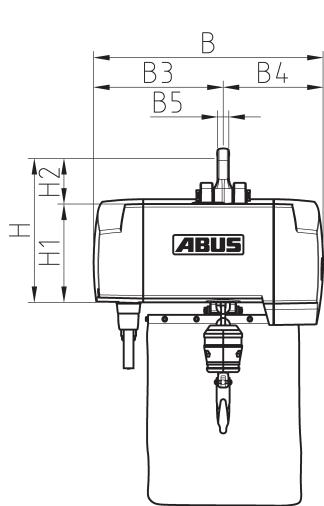

If you prefer a festoon system, do you need a mobile control carrier?

- yes
- no
- please provide advice
