ABUS overhead travelling cranes.
The solution for difficult tasks.
ABUS overhead travelling cranes can lift, handle and lower loads of up to 120 tonnes*. Four main types are available: these include single-girder travelling cranes, double-girder travelling cranes for heavy-duty work and wide spans and underslung travelling cranes for buildings with special conditions. The fourth main type is the wall travelling crane, installed on a separate crane track beneath the other types in order to optimise material handling.

- **Load capacity:** up to 120 t max. *
- **Span:** up to 40 m *
  (depending on load capacity)
- **Applications:** mainly for area-coverage material handling within buildings
- **Characteristics:** comprehensive standard and optional equipment to suit individual applications

* Details of higher load capacities and wider spans on application.
**ABUS single-girder overhead travelling cranes**

- **Load capacity**: up to 16 t
- **Span**: up to 39 m
  (depending on load capacity)

**ELV**: Single-girder overhead travelling crane with rolled section girder

**ELK**: Single-girder overhead travelling crane with welded box girder

**ELS**: Single-girder torsion box crane with side-mounted trolley

- wide range of connection variants for optimum adaptation to local conditions
- very high hook positions possible

**ABUS double-girder overhead travelling cranes**

* Details of higher load capacities and wider spans on application.

- **Load capacity**: up to 120 t
- **Span**: up to 40 m
  (depending on load capacity)

**ZLK**: Double-girder overhead travelling crane with welded box girder

- easy to install accessories
- high crane and trolley travel speeds possible
- wide range of connection variants for optimum adaptation to local conditions
- very high hook positions possible
ABUS underslung overhead travelling cranes

- Load capacity: up to 8 t
- Span: up to 25 m
  (depending on load capacity)

DVLM: Underslung overhead travelling crane for lighter loads
EDL: Underslung overhead travelling crane for heavier loads

- Crane track mounted on ceiling
- The ideal solution for buildings with difficult or tight conditions
- Short side approach dimensions, allowing optimum utilization of building width

ABUS EKL wall travelling crane

- Load capacity: up to 5 t
- Track length: up to 12 m
  (depending on load capacity)

- Installed on its own track beneath other types of travelling crane
- Ideal for use as a workplace crane serving several work stations
ABUS HB light crane system.
You can always extend a really smart system.
ABUS HB is a modular system which allows you to build up a complete tailor-made material handling solution to suit your requirements. The system can be adapted to the conditions and dimensions of almost any application and reliably mounted on a wide variety of different ceilings. The main advantage of an ABUS HB system is that it can easily be extended and adapted at any time, allowing it to grow with your business.

6: ABUS single girder rolling beam crane system EHB-1

5: ABUS double girder rolling beam crane system ZHB-I

4: ABUS EHB-X raised up single-girder crane

3: ABUS ESB monorail
for linear point-to-point coverage

- ABUS ESB monorail
  - curves are possible on the track
  - low headroom
  - wide suspension spacing
  - optional electric hoist travel

- Load capacity: up to 2 t

for area coverage

- ABUS ZSB double-rail
  - wide suspension spacing
  - chain hoist installed between rails for improved lift height
  - optional electric hoist travel
  - optional mobile control

- Load capacity: up to 2 t
  - Crane girder length: up to 12 m (depending on load capacity)

- ABUS ZHB double-girder crane
  - chain hoist installed between crane girders for improved lift height
  - very low headroom
  - optional electric long + cross travel
  - optional mobile control

- Load capacity: up to 2 t
  - Crane girder length: up to 10 m (depending on load capacity)

- ABUS EHB single-girder crane
  - very light crane; ideal for use in lightweight buildings
  - easy to move manually
  - low headroom
  - short end approach dimensions
  - wide suspension spacing

- Load capacity: up to 1 t
for area coverage

Load capacity: up to 1 t
Crane girder length: up to 8 m
(depending on load capacity)

ABUS EHB-X raised up single-girder crane
■ stooled up crane for optimum use of available space
■ easy to move manually
■ ultra low headroom
■ short end approach dimensions
■ wide suspension spacing
■ optional electric long + cross travel
■ optional mobile control

Load capacity: up to 1 t
Crane girder length: up to 10 m
(depending on load capacity)

ABUS single girder rolling beam crane system EHB-I
■ Very low self weight, ideal for lightweight construction buildings
■ easy to move manually
■ standard ‘I’ beams utilised as downshop crane tracks
■ favourable approach dimensions

Load capacity: up to 2 t
Crane girder length: up to 8 m
(depending on load capacity)

ABUS ZHB-X raised up double-girder crane
■ stooled up crane for optimum use of available space
■ ultra low headroom
■ wide maximum suspension spacing
■ optional electric long + cross travel
■ optional mobile control

Load capacity: up to 1.6 t
Crane girder length: up to 22 m
(depending on load capacity)

ABUS ZHB-3 double-girder crane
■ long crane spans possible
■ lower headroom compared with EOT
■ wide suspension spacing
■ electric long + cross travel
■ optional mobile control

Load capacity: up to 2 t
Crane girder length: up to 12 m
(depending on load capacity)

ABUS double girder rolling beam crane system ZHB-I
■ High load capacity
■ Particularly favourable hook heights due to the arrangement of the chain hoist stooled up between the crane beams
■ standard ‘I’ beams utilised as downshop crane tracks
■ Electrically powered motions (Option)
■ Mobile pendant controller (Option)
ABUS jib cranes.
A sound basis for efficient material handling.
ABUS jib cranes are extremely versatile units which can easily be adapted to the customer’s specific requirements. For example, jib cranes can be mounted on floors, walls or existing supports. Electric wire rope or chain hoists are available as options, as are electric hoist travel and electric slewing gear.

- **Load capacity:** up to 6.3 t max.
- **Jib length:** up to approx. 10 m (depending on load capacity)
- **Applications:** swept area coverage
- **Characteristics:** can be installed in any position, slewing range up to 360°, depending on model
ABUS jib cranes

Load capacity: up to 1 t
Jib length: up to 7 m (depending on load capacity)
ABUS LS pillar jib crane
- light self weight; can be installed even if floor or foundation conditions are difficult
- almost effortless push trolley travel

Load capacity: up to 0.5 t
Jib length: up to 7 m (depending on load capacity)
ABUS LSX pillar jib crane
- smooth-running jib for easy manual operation
- optimal highest hook position
- optional electric hoist travel

Load capacity: up to 1 t
Jib length: up to 7 m (depending on load capacity)
ABUS LW wall jib crane
- relatively light weight; can also be installed in lightweight buildings
- trolley very easy to move by hand

Load capacity: up to 0.5 t
Jib length: up to 7 m (depending on load capacity)
ABUS LWX wall jib crane
- smooth-running jib for easy manual operation
- optimal highest hook position
- optional electric trolley travel
**ABUS jib cranes**

The illustration shows a crane with electric slewing gear, electric trolley travel and mobile control.

**Load capacity: up to 4 t**
**Jib length: up to 10 m** (depending on load capacity)

**ABUS VS pillar jib crane with electric chain hoist**
- low headroom offers optimal highest hook position
- optional electric slewing gear
- optional electric hoist travel
- optional mobile control

**Load capacity: up to 6.3 t**
**Jib length: up to 10 m** (depending on load capacity)

**ABUS VS pillar jib crane with electric wire rope hoist**
- low headroom offers optimal highest hook position
- electric slewing gear
- electric hoist travel
- mobile control

The illustration shows a crane with electric slewing gear, electric trolley travel and mobile control.

**Load capacity: up to 4 t**
**Jib length: up to 10 m** (depending on load capacity)

**ABUS VW wall jib crane with electric chain hoist**
- low headroom offers optimal highest hook position
- optional electric slewing gear
- optional electric trolley travel
- optional mobile control

**Load capacity: up to 5 t**
**Jib length: up to 10 m** (depending on load capacity)

**ABUS VW wall jib crane with electric wire rope hoist**
- low headroom offers optimal highest hook position
- electric slewing gear
- electric trolley travel
- mobile control
ABUS electric wire rope hoists. For sensitive handling of heavy loads.

ABUS electric wire rope hoists are the central components of crane systems for handling heavy loads. They feature motors, brakes, transmissions and electrical and electronic systems that have all been tried and tested over many years of arduous service. Standard precision travel and lifting speeds allow the power and speed available to be gauged precisely. ABUS electric wire rope hoists are also extremely user friendly, featuring compact design, very easy maintenance and easy plug-in connectors.
ABUS type E electric wire rope hoists

This ABUS type DB electric wire rope hoist has a walkable service platform for even easier maintenance.

The ABUS type E electric wire rope hoist: a compact solution for single-girder travelling cranes.

This installation benefits from the ultra low headroom design of the ABUS type DQA wire rope hoist.

- **Load capacity**: up to 120 t max.
- **Characteristics**: favourable dimensions, comprehensive standard and optional equipment
ABUS electric wire rope hoists for single-girder travelling cranes

**Load capacity: up to 16 t**

**Type E · monorail trolley**
- compact design
- two direct-driven trolleys without open gears
- trolley can be adapted to different flange widths

**Load capacity: up to 10 t**

**Type S · Side-mounted trolley**
- reeving beside crane bridge for optimum maximum hook height

**Load capacity: up to 25 t**

**Type U · Bottom flange trolley**
- can be used on a monorail track with normal rolled section girders
- direct-driven trolleys without open gears
- 8 wheel end carriages for reduced wheel loads
ABUS electric wire rope hoists for double-girder travelling cranes

Load capacity: up to 63 t

Type D · Standard Crab Unit
- articulated end carriage connection for firm four-wheel contact
- two direct drives for trolley without open gears
- walkable service platform optional

Load capacity: up to 40 t

Type DQA · Stooled-down Crab Unit
- ultra low headroom design
- articulated end carriage connection for firm four-wheel contact
- two direct drives for trolley without open gears

Load capacity: up to 120 t

Type Z · Twin Drive Crab Unit
- with twin hoist
- articulated end carriage connection for firm four-wheel contact
- two direct drives for trolley without open gears
- walkable service platform optional
ABUS electric chain hoists. Reliable links in the material handling chain.

In stationary installations, with push trolleys or electric trolleys, ABUS electric chain hoists have a number of extremely useful, user-oriented advantages. These include a very low headroom design for optimum utilisation of available space, a standard precision lifting speed for sensitive lifting and lowering operations and brake linings with a long service life. Under normal conditions, the unit can complete 1 million full-load braking operations before adjustment is required.

- **Load capacity:** up to 4 t max.
- **Characteristics:** low headroom, dual lifting speeds as standard feature, ready for installation, comprehensive standard and optional equipment
ABUS electric chain hoists

**Load capacity: up to 200 kg**
**Lifting speed: up to 12 m/min**

Electric chain hoist ABUCompact GMC
- with ABUCommander push button pendant as standard equipment
- can be connected to 230 V power socket (single phase)
- infinitely variable lifting speed
- hook path: 3/6/10/20 m
- weight: approx. 10 kg / 12 kg

**Load capacity: up to 630 kg**
**Lifting speed: up to 20 m/min**

Electric chain hoist ABUCompact GM2
- with ABUCommander push button pendant as standard equipment
- 2 lifting speeds as standard feature

**Load capacity: up to 1250 kg**
**Lifting speed: up to 20 m/min**

Electric chain hoist ABUCompact GM8
- with ABUCommander push button pendant as standard equipment
- 2 lifting speeds as standard feature

**Load capacity: up to 2500 kg**
**Lifting speed: up to 16 m/min**

Electric chain hoist ABUCompact GM6
- with ABUCommander push button pendant as standard equipment
- 2 lifting speeds as standard feature

**Load capacity: up to 4000 kg**
**Lifting speed: up to 20 m/min**

Electric chain hoist ABUCompact GM4
- with ABUCommander push button pendant as standard equipment
- 2 lifting speeds as standard feature

Moving on up.
ABUS lightweight mobile gantries. Take it where you need it.

With the ABUS lightweight mobile gantry, you can mobilize the lifting power of an ABUS electric chain hoist. The crane is designed for loads up to two tonnes and features four steerable stop rollers for easy handling. Lifting power is always available where you need it. Depending on the load capacity required, the maximum overall width is up to 7.9 m and the maximum overall height up to 5 m. If necessary, the ABUS lightweight mobile gantry is also easy to dismantle.

- **Load capacity:** up to 2 t max.
- **Applications:** mobile
- **Characteristics:** easy to move and dismantle, with four steerable stop rollers (two with 90° direction locks)
ABUS monorail trolley track
Solutions for a linear point-to-point movement of large loads

ABUS monorail trolley tracks are the ideal solution for those applications where a linear material flow is needed. Application-specific options for fixing the system onto existing ceiling constructions or portal supports fixed on the floor allow optimised solutions for the transport of loads. ABUS electric chain hoists with a push-pull or a powered trolley are used for load capacities up to 4 t. ABUS electric wire rope hoists type E are used for larger load capacities.

Thanks to an extensive range of standard and optional equipment, such as the ABUS radio remote control system, loads can be moved in an easier and more flexible manner.

- **Load capacity:** up to 16 t max.
- **Field of application:** linear point-to-point transport
- **Characteristics:** allows flexible and individual planning, many options for fixing, extensive standard and optional equipment
Anything else you need?  
The ABUS accessories range.

With the accessories in the ABUS range, you can tailor an ABUS crane to meet your specific requirements. The equipment available, ranging from energy chains and radio remote controls to lighting and load measurement systems, should be sufficient to meet all your needs.

Radio remote control
Radio remote controls give crane operators greater freedom of movement, allowing them to choose the position which gives the best view of their working area and effectively saving time. ABUS offers radio remote controls with joystick or compact push-button hand held transmitter. ABUS radio remote controls are also suitable for multiuser operation, with parallel access to several cranes.

AZS smooth starting units and SU-2 smooth switching relays are the ideal accessories for the smooth handling of sensitive loads and goods using pole-changing drive systems. These electronic systems operator to control crane and trolley travel sensitively with adjustable acceleration and improved deceleration characteristics. Depending on individual requirements, the system can also be used separately for crane or trolley travel.

Crane lighting
Halogen spotlights, high-pressure sodium vapour (NAV) and high-pressure halogen metal vapour lamps are available for lighting the working area under the crane. The 750 W halogen spotlights feature a housing made from aluminium sheet and diecast aluminium. The two other lamps, each rated 400 W, are equipped with a galvanized steel housing.
Anti-collision devices
The ABUS anti-collision device incorporates a photoelectric distance measurement system which prevents accidental collision. Automatic switchover to a lower speed as the two hoists approach each other is a standard feature. A shut-down function can be incorporated. ABUS can also supply collision prevention devices designed to maintain a specified minimum spacing and other special designs.

Load measurement systems
LIS-SE: Load measurement and evaluation system that measures the voltage and current on all three phases of the hoist motor. Optional functions: load display in the push button pendant and load population recorder.

LIS-SV: this load indicator system offers all the functions of the LIS-SE system, but uses load measurement sensors in addition to motor current measurements. This system is an attractive proposition for systems with several hoists where the overall total load of all hoists needs to be limited. This system increases measurement accuracy. The load can be indicated either on the display in the pendant control or on a large load display.

ABUS cross-type limit switches
limit long travel and cross travel, automatically slowing or stopping the crane or the hoist at the end of the track. These limit switches may also be applied for crane zoning if it is necessary to divert a hoist on a crane around a prohibited area. The switch is operated by a switching lug installed on the crane track or on the crane bridge.
Good design is a matter of detail. Good service too.

Precise and reliable right down to the last detail. Computer-aided design systems give a clear overview at all stages in the project.

Comprehensive advice, consistently applied, lays a solid foundation for the design of any crane system. Our computer-aided design team uses a continuous database for all stages from initial stocktaking through to planning and design. The result is a proposal with full technical documentation precisely in accordance with your requirements. Our proposals form a reliable basis for your decision to purchase a modern, high-performance indoor crane system.
ABUS Service is a standard feature of ABUS quality.

The ABUS all-inclusive service package offers greater safety and helps save costs. Apart from regular servicing, the package includes a number of other services which would normally result in additional cost. In addition, early diagnosis and regular maintenance by trained ABUS service staff systematically improve the availability of your crane system. ABUS service packages are also available for cranes and hoists produced by other companies.
